DETAILED ACTION

Page 2

Terminal Disclaimer

1. The terminal disclaimer filed on 19 December 2005 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. # 6,689,964 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kuroda et al (JP 56-151,323 A) in view of Day (US # 3,967,271). As noted by the applicant in his last remarks, the only difference between the scale shown in Kuoda and the claimed invention is that the optical shaft encoder of Kuoda consists of an opaque disk 20 (I.E.: "the movable member") with alternating reflective and dark markings where both the light emitter 25 and light detector 26 of the "sensor arrangement" 24 are located on the same side of the opaque disk 20 (as shown in Figure 6), instead of the optical shaft encoder comprising of a transparent disk with alternating transparent and opaque sections (where the light emitter and light detector of the "sensor arrangement"

Art Unit: 2841

are on the opposite sides of the disk) as claimed. Day show that it is an art recognized functional equivalent to use a sensor arrangement consisting of a transparent disk 50 with alternating transparent 52,54 and opaque sections where the light emitters 56,58 and light detectors 60,62 of the "sensor arrangement" are on the opposite sides of the disk (Col. 3, lines 34-68). It would have been obvious to substitute the optical shaft encoder of Day for the optical shaft encoder of Kuroda because these two types of shaft encoders were recognized as functional equivalents in the weighing art as evidenced by both types of shaft encoders being used in the same way for the same purpose in similar types of weighing scales. See *In re Fout*, 675 F.2d 297, 213 USPQ 532 (CCPA 1982); and, *MPEP* §§ 2144.06 & 2144.07.

Conclusion

4. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Randy W. Gibson whose telephone number is (571) 272-2103. The examiner can normally be reached on Mon-Fri., 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kamand Cuneo can be reached on (571) 272-1957. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
